Data Clearing Center

Your focus is data, not devices

CarMedialab acts as a telematics service provider for small and medium sized fleet operators. Our Data Clearing Center integrates in-vehicle hardware with customers' back-end applications. Your entry point is data, not device integration and management.

We care about infrastructure and the devices' lifecycle: starting with end-of-line testing, integration and automatic set-up in the vehicle right through to decommissioning after usage. Furthermore, operational aspects, such as configuration and software updates, are managed by the Data Clearing Center's standard functionality.

Key Requirements

- Integration server for telematics applications
- Secure, reliable and scalable server based on standard technologies
- Connects devices and existing back-end applications
- Business models for hosting, operating and licensing

Your benefits

- No investment in infrastructure on customer's side
- Easy and fast set-up
- Integration on server-server level
- Device lifecycle management
